Config Device IP Address

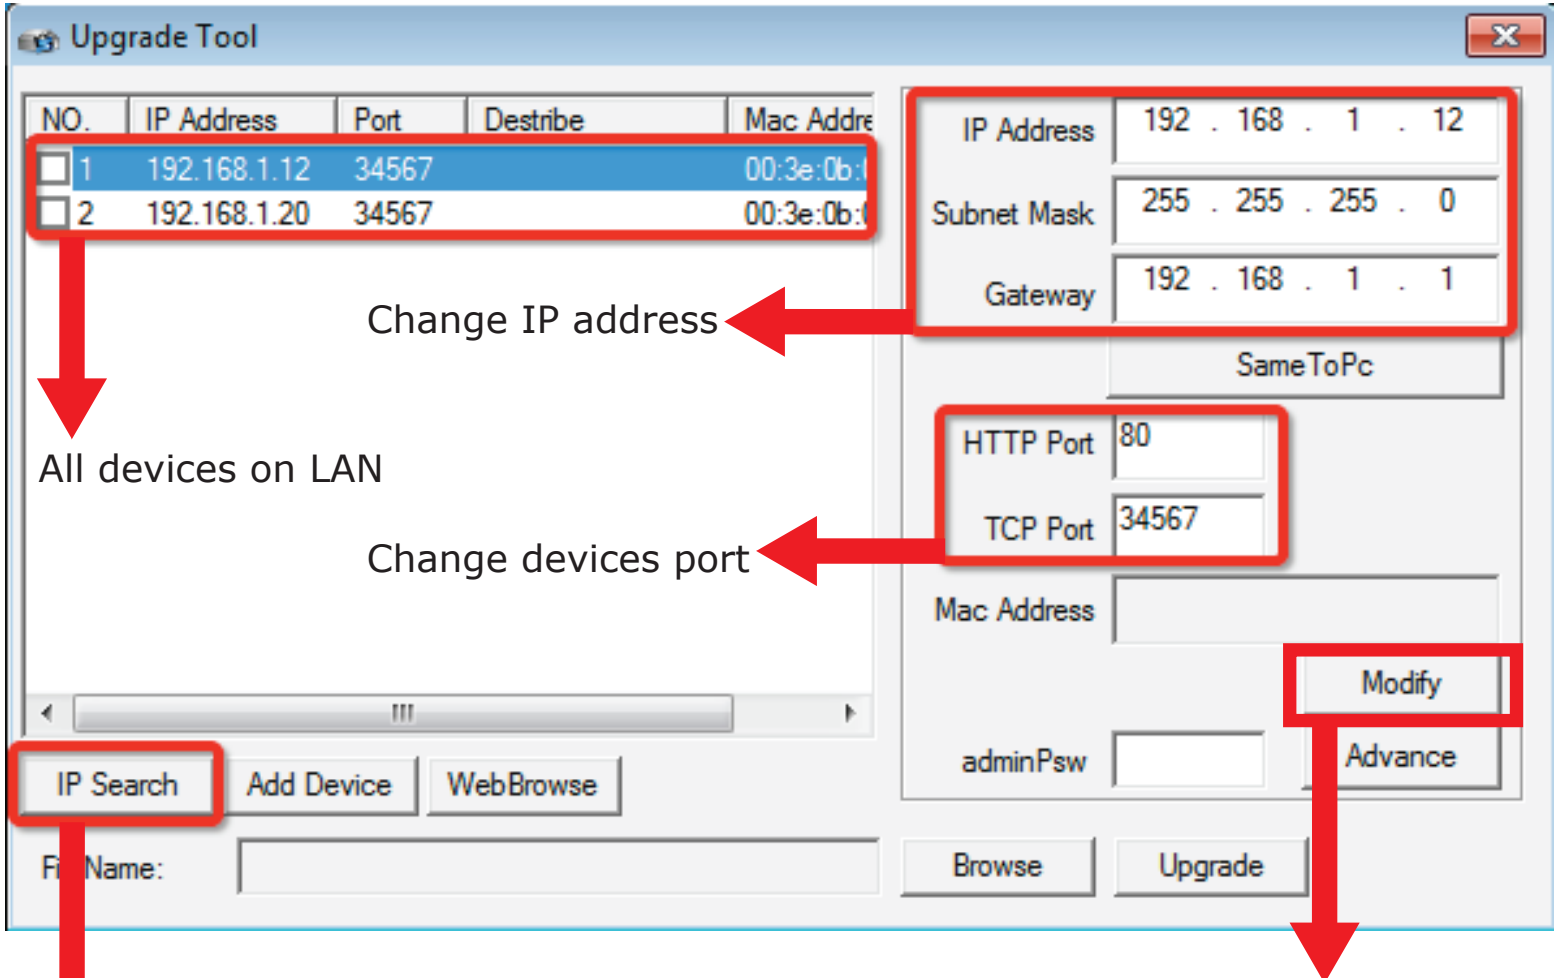

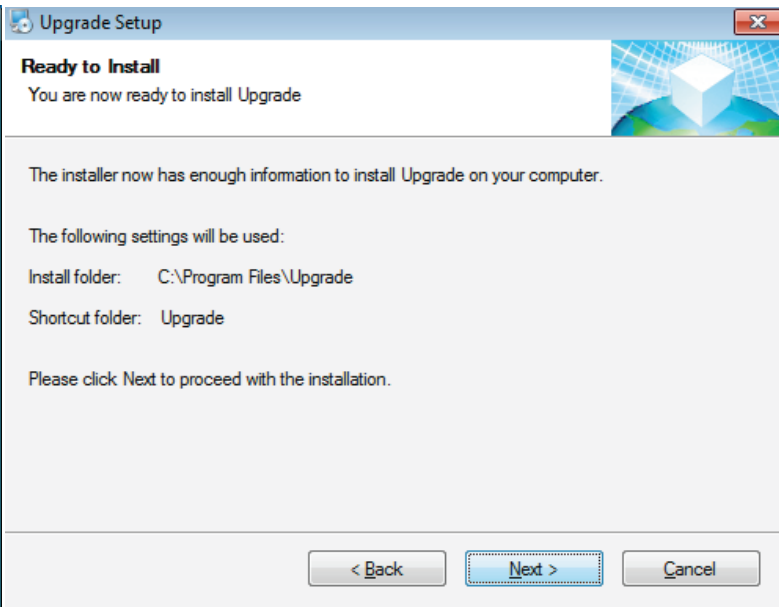

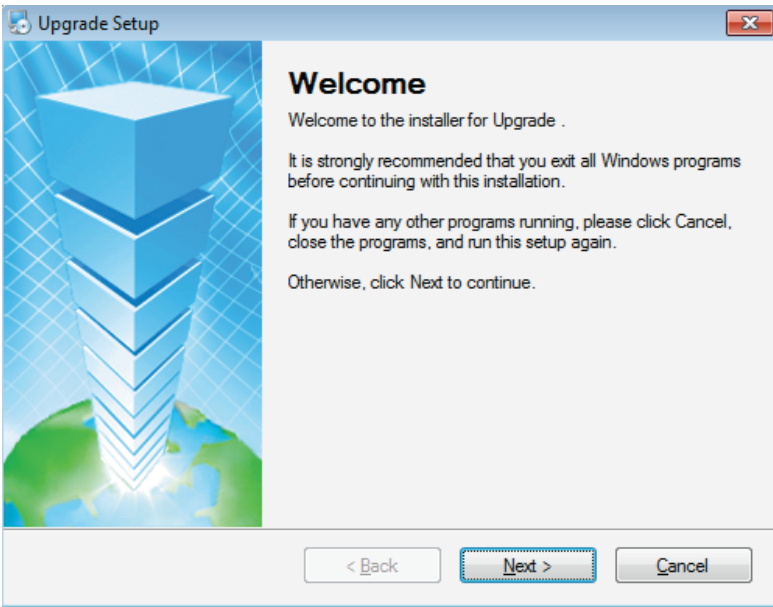

Please use **Upgrade** software to search device current IP address.
The default ip address is 192.168.1.10

Download Link:

<http://www.cctvdiscover.com/download/XM/Upgrade/>

Install the software on your PC, everywhere is fine, just make sure you have Administrator power.

Note: So far this software only PC version, if you are a Mac user, we are suggest use VMWare, ParallelsDesktop or other virtual PC software

Chick **Modify** button when you finished all config

Use **IP Search** button to search all the IPC devices on your local network. Also it can detect the IPC devices not in the same subnetwork.

☐ Obtain an IP address automatically

☒ Use the following IP address:

IP address: 192 . 168 . 0 . 90

Subnet mask: 255 . 255 . 255 . 0

Default gateway: 192 . 168 . 0 . 1

If device is different subnetwork for you LAN, please change to same.

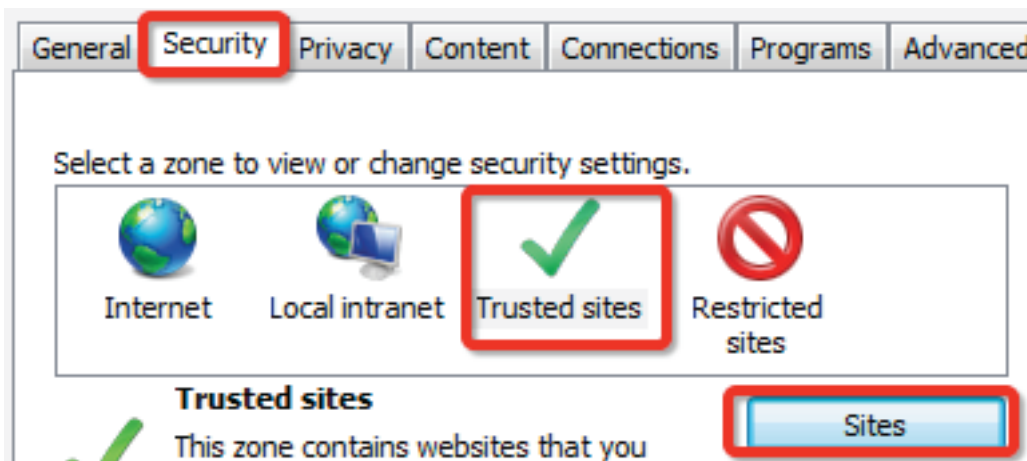

IE Browser Login

IPC devices support use Windows Internet Explorer to view and Manage. If you first time to open devices login page, IE will ask you to install a Add-on.

Some Config for IE

Open IE options page, click Security tab.

Add 192.168.1.* to the list, if you subnetwork not in "1", please follow your Router setting.

Change security level to Low

Allowed levels for this zone: All

Low

- Minimal safeguards and warning prompts are provided
- Most content is downloaded and run without prompts
- All active content can run
- Appropriate for sites that you absolutely trust

If you still can not install the add-on, please make sure your IE is 32bit version, 64bit IE not be support.

Also you can download the add-on program and install without open IE.
